

- (ii) Explain how another SQL statement using a different field could be used to display the same information.

We could use the NumberBags field to show how many bags of this material are left.

[2]

[5]

The flowchart represents an algorithm.

The table represents the two-dimensional (2D) array `Word[]` which stores the first half of the phonetic alphabet used for radio transmission. For example, `Word[10, 1]` is 'J'.

Index	1	2
1	A	Alpha
2	B	Bravo
3	C	Charlie
4	D	Delta
5	E	Echo
6	F	Foxtrot
7	G	Golf
8	H	Hotel
9	I	India
10	J	Juliet
11	K	Kilo
12	L	Lima
13	M	Mike

(a) Complete the trace table for the algorithm by using the input data: F, Y, D, N

Pointer	Letter	Choice	OUTPUT
1	F		
2			
3			
4			
5			
6			Letter F is represented by Foxtrot
			Another letter? (Y or N)
		Y	
1	D		
2			
3			
4			Letter D is represented by Delta
			Another letter? (Y or N)
		N	

[4]

(b)

Describe one problem that could occur with this algorithm if an invalid character was input.

~~Pointer~~ After pointer reaches 13 and still cannot find data it was looking for, the algorithm will crash.
